

Discrete Finite Automata (DFAs)

1

In a discrete finite automaton (DFA), there might exist multiple transitions from a state to different states and including the same symbol ☐ (2 Pontos)

☐ TRUE

☐ FALSE

2

There might be more than one DFA for the same language: ☐ (2 Pontos)

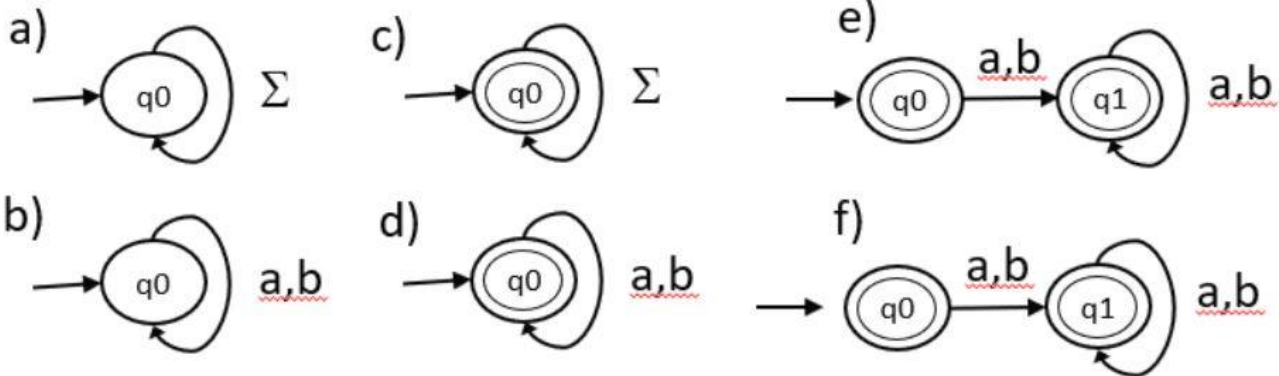

☐ TRUE

☐ FALSE

3

☐ (6 Pontos)

Given $\Sigma = \{a, b\}$ and $L = \Sigma^*$, select the DFA that represents L :

☐ a)

☐ b)

☐ c) and d)

☐ e) and f)

☐ c), d), e), and f)

☐ c) and e)

☐ d) and f)
